

Empathy Map

Date	02 october 2026
Team ID	6ab63861dcdae33acb394aaf
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS - "Managing ACL rules manually for hundreds of users takes too long." - "I need an automated script to assign and revoke roles quickly." - "Manual ACL edits frequently cause configuration gaps."	THINKS - "What if an improper ACL rule exposes sensitive table data?" - "There must be a script-controlled way to enforce least-privilege." - "I wish I had a comprehensive audit log for every change."
PERSON NAME (ServiceNow Type)	
DOES - Manually modifies ServiceNow ACL records one by one. - Uses spreadsheets to track user role requests and approvals. - Spends hours debugging access permissions for onboarding staff.	FEELS - Overwhelmed by repetitive access requests during misconfigurations. - Confident when automated scripts enforce repeatable security.
