Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Explores native ACL UI - Researches script tool - Identifies manual delay	- Writes ACL scripts - Defines role mappings - Runs pre-execution test	- Executes batch script - Audits security logs - Monitors role changes
Touchpoint <i>What part of the service do they interact with?</i>	- ServiceNow Admin Panel - Incident/Request tickets - Documentation portal	- CustomScript Editor - GlideRecord engine - Syntax validator widget	- Real-time Dashboard - Audit Trail viewer - Rollback console
Customer Thought <i>What is the customer thinking?</i>	- "Configuring 50 ACLs manually" - "Is there an automated script tool?"	- "Rules applied in seconds." - "The syntax validation caught my"	- "Zero access violations found in audit." - "Rollback gives peace of mind."
Customer Feeling <i>What is the customer feeling?</i>	Frustrated with repetitive manual ACL steps and worried about configuration errors.	Empowered and relieved by script-based batch rule automation and instant checks.	Confident, secure, and fully compliant with organizational audit requirements.
