

## Solution Requirements

|                      |                                                                        |
|----------------------|------------------------------------------------------------------------|
| <b>Date</b>          | 02 october 2026                                                        |
| <b>Team ID</b>       | 6ab63861dcdae33acb394aaf                                               |
| <b>Project Name</b>  | Script-Controlled ACL – Restrict Record Access<br>Based on Field Value |
| <b>Maximum Marks</b> | 4 Marks                                                                |

### Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

credentials to access the ACL console.

- <sup>1</sup> • **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

### <sup>2</sup> Authorization

Fill out the descriptions and necessary details for each category provided below.

### Step 1: Functional Requirements (FR)

| S.No | Requirement Category | Requirement Description                                                                                         | Priority (High/Medium/Low) |
|------|----------------------|-----------------------------------------------------------------------------------------------------------------|----------------------------|
| 1    | Atomic Execution     | ACLscript execution is atomic- all rules applied or entire batch rolled back automatically on error.            | Medium                     |
| 2    | Reporting            | Generate ACL audit reports, user access summaries, and compliance dashboards. Export to CSV/PDF.                | Medium                     |
| 3    | Business Rules       | ACL rules follow least-privilege principle. Scripts must pass validation. Critical changes require approval.    | High                       |
| 4    | Compliance           | Adherence to SOX compliance for access controls. Audit trail for all ACL modifications per ITSM best practices. | High                       |
| 8    | Rollback Ops         | Bulk ACL operations via script upload. Script template library. One-click rollback for recent modifications.    | Medium                     |
