Project Title	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4marks

Project proposal solution

The proposal report aims to transform ACL management in ServiceNow using script-based automation, boosting efficiency and accuracy. The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	implementing advanced machine learning techniques, ensuring faster and more accurate assessments.
Scope	Approval process, incorporating machine learning for a more robust and efficient system.
Problem Statement	
Description	Addressing inaccuracies and inefficiencies in the current loan approval system adversely affects operational efficiency and customer satisfaction.
Impact	reduced risks, and an overall enhancement in the lending process, contributing to customer satisfaction and organizational success.
Proposed Solution	
Approach	Developing a ServiceNow app using server-side JavaScript (GlideRecord API, Script Includes, 1.Script-based ACL Engine 2.Bulk operations 3.Real-time validation 4.Complete audit trail & rollback 5. creditworthiness, creating a dynamic and adaptable loan approval system.
Key Features	- Implementation of a machine learning-based credit assessment model.
