

Scalability & Future Plan

Date	02 october 2026
Team ID	6ab63861dcdae33acb394aaf
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1 1	Bulk operations capped at 500 rules per batch	Large orgs may need to split scripts into batches	High
2 2	No AI-based access anomaly detection	Unauthorized changes may go unnoticed until audit	Medium
3 3	Dashboard lacks real-time auto-refresh	Admins must reload the page to see latest metrics	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Tested with 10 concurrent admin users	Optimize for 50+ concurrent users with caching and async jobs
2	Data Storage	Custom tables with basic indexing	Implement table partitioning and archival for 100K+ records
3	Performance	Single-threaded script execution	Parallel processing using ServiceNow Flow Designer & Queues
4	Security	Role-based access with SSO	Add MFA, IP whitelisting, and session management for console

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
